HISTORY

Cauca is located in southern Colombia, where coffee is grown in fertile volcanic soil. The Cordillera de Occidental, Central and Oriental (mountain ranges) offer unique climate conditions favorable for high quality coffee, with more than 94,000 families growing coffee. This blend was selected from farmers in 17 municipalities.

The zones where Café de Cauca is grown have peculiar characteristics, including soils that are derived from volcanic ashes. Nearby volcanoes such as Sotará and Puracé generate colder winds positively affecting coffee quality.
